💡 Ask your health-related question. Bot messages are left, your messages are right.

-  Hello! I'm your AI medical assistant.
Ask me about symptoms, recovery, or
health tips.

 hi

- Hi! How can I help you today?

may i know whether this is fever or not my
body temperature is above 100 degree ,
illness , i cant able to sleep

- Yes, if your body temperature is above
100°F (37.8°C), it is considered a **Fever**.
- Other signs that may accompany a **Fever**
include:
- Feeling tired or weak
- Shaking or **Chills**
- **Headache**
- Body aches
- Loss of appetite
- Since you're also having trouble sleeping,
this could be due to the **Fever** or an
underlying illness.

- It's important to rest, stay hydrated, and monitor your temperature. If the **Fever** lasts more than 3 days or is very high (above 104°F), or if you have difficulty breathing, confusion, or severe symptoms, seek medical help.

can i get consent from the doctor

- Yes, you can get consent from the doctor.
- The doctor will explain the **Treatment**, procedure, or test, including the risks, benefits, and alternatives.
- You have the right to ask questions and decide whether to proceed.
- If you are not comfortable, you can choose not to go ahead.
- This is called informed consent.

thanks for the help bot

- You're welcome! Feel free to ask if you need help with anything else. 😊
